Slide 1: Title Slide

Title: Distribution Management App

Subtitle: End-to-End Operational Control for Sales, Delivery, and Collections

Footer: Prepared for Stakeholder Review | April 24, 2026

Speaker Notes:

This solution is built to manage the full distribution journey from market order booking to delivery completion and payment tracking in one connected system.

Slide 2: Business Challenge

Title: What Problem Are We Solving?

Key Points:

- Manual and disconnected work causes delays and errors.
- Field order taking is difficult when internet is unstable.
- Delivery, stock, and payment information often do not stay aligned.
- Management lacks one real-time view of operations and receivables.

Speaker Notes:

The app addresses operational fragmentation by bringing field and office teams into one controlled workflow.

Slide 3: Solution Overview

Title: What the App Delivers

Key Points:

- One platform for products, routes, shops, salesmen, orders, deliveries, and financial tracking.
- Desktop module for admin control and reporting.
- Mobile module for field sales execution.
- Central server to keep official business records synchronized.

Speaker Notes:

Think of this as a business operating system for distribution, not just an order app.

Slide 4: End-to-End Process

Title: Daily Operational Flow**Key Points:**

1. Admin sets up products, routes, shops, warehouses, and salesmen.
2. Salesman books shop orders on mobile during visits.
3. Orders sync instantly or later when internet is available.
4. Office processes orders and manages deliveries.
5. Stock and customer balances update automatically.
6. Payments and returns are recorded with automatic adjustments.

Speaker Notes:

The system links execution and finance so business decisions rely on updated and connected data.

Slide 5: User Roles and Responsibilities

Title: Who Uses What**Key Points:**

- **Admin/Manager (Desktop):** Setup, approvals, delivery control, ledger oversight.
- **Salesman (Mobile):** Shop visits, order booking, route-based execution.
- **Owner/Stakeholder (Desktop):** Sales health, delivery performance, receivable visibility.

Speaker Notes:

Each role gets focused access, reducing confusion and improving accountability.

Slide 6: Key Functional Modules

Title: Core Business Modules**Key Points:**

- Product and warehouse stock management
- Route, shop, and salesman management
- Order lifecycle tracking
- Delivery status and execution monitoring
- Customer ledger and payment collection tracking
- Stock return handling and adjustment control
- Route consolidated billing support

Speaker Notes:

These modules are designed to cover practical day-to-day business needs without forcing parallel manual systems.

Slide 7: Control, Security, and Reliability

Title: Built-In Business Controls

Key Points:

- Role-based access control
- Salesman-level data isolation
- Offline mobile operation for weak network areas
- Auto-sync with retry for pending transactions
- Validation checks for duplicate and invalid actions
- Dependency safeguards before critical delete actions

Speaker Notes:

These controls reduce operational risk and improve trust in reported data.

Slide 8: Financial Visibility

Title: Revenue and Receivables Monitoring

Key Points:

- Customer ledger reflects dues and payment adjustments.
- Daily collections are tracked by payment method.
- Return transactions automatically impact financial balances.
- Management can monitor pending receivables and recovery progress.

Speaker Notes:

The app does not only capture sales volume; it also supports cash recovery discipline.

Slide 9: Business Impact

Title: Expected Outcomes

Key Points:

- Faster order-to-delivery execution
- Better stock accuracy
- Lower dependency on manual reconciliation
- Improved salesman productivity in the field
- Better management confidence through consistent reporting

Speaker Notes:

The business gains speed, control, and visibility at the same time.

Slide 10: Implementation Position and Next Steps

Title: Current Position and Suggested Next Actions

Key Points:

- Current active process is **Order -> Delivery**.
- Platform is already structured for daily operations and reporting.

- Recommended next actions:
 1. Define KPI dashboard targets for leadership review.
 2. Standardize end-of-day operational checklist.
 3. Plan phased enhancements based on user feedback.

Speaker Notes:

The app is operationally strong in its core flow and ready for structured stakeholder reporting and scale improvements.

Optional Closing Slide

Title: Final Message

Text:

This solution gives the business a practical and scalable foundation for modern distribution operations, combining field execution, office control, and financial tracking in one integrated system.
